Prof. Dr. José Narro Robles
Rector
Universidad Nacional Autonoma de México
Mexico, D.F.
Mexico

Dear Mr. Rector,

with this letter I want to recommend you to award Prof. Dr. Peter Hess, Instituto de Ciencias Nucleares, UNAM, with the price "Universidad Nacional" because of his very excellent, internationally highly recognized and very outstanding achievements and contributions in theoretical nuclear physics. He is one of the most famous specialists for nuclear group theory in the world. Recently, he developed a new pseudo-complex theory of general relativity which allows to avoid black holes. This is an immense theoretical progress in astronomy.

I should mention that Prof. Hess was awarded two times with a guest professorship from the German Association for Research (DFG) and the German Academic Exchange Service (DAAD). He spent the times at my institute from 1 July 1992 to 30 June 1993 and from 1 August 1998 to 31 July 1999.

In summary, I recommend you with great emphasis to award Prof. Dr. Peter Hess with the price "Universidad Nacional" for his new and outstanding contributions to the theory of general relativity.

Sincerely yours

(Werner Scheid)
